

# ARTUR IASENOVETS

Chongqing, China • [archee.busy@gmail.com](mailto:archee.busy@gmail.com) • [LinkedIn](#)

**Software Engineer** with more than 3 years of experience building production-grade applications, including 1 year developing LLM-powered products at an EdTech startup and 6 months interning at Positive Technologies, a leading Eastern European cybersecurity company. Proficient in Python, Go, and TypeScript, familiar with Windows and Linux environments, and experienced in security tooling, threat intelligence pipelines, and end-to-end CI/CD automation. Published research on blockchain query privacy using homomorphic encryption scheme, cryptographic protocols for searchable encryption, and multi-feed threat intelligence in peer-reviewed journals.

## Experience

### Security Intern

Remote

*Positive Technologies — Leading Eastern European cybersecurity company*

*Aug. 2024 – Feb. 2025*

- Developed **Python** regex utilities with unit-test coverage for parsing Windows file paths and network configs at the **MaxPatrol EDR** product team; built a **Windows Prefetch**-based software allowlist/blocklist checker and a Dockerized **Telegram bot** for automated compliance monitoring.
- Engineered a **Python** file-processing pipeline for the **Threat Intelligence** team, fetching malware samples from VX-Underground, storing extracted files in **S3/MinIO**, and scanning them with **YARA** rules; packaged the workflow as an **Airflow DAG** for daily automated processing.
- Performed hands-on security analysis as part of the **SOC** team: investigated attack chains for **CVE-2020-5902** and **CVE-2023-38831**, conducted EVTX log forensics with **Chainsaw**, deobfuscated PowerShell payloads, analyzed malicious **VBA macros** with oletools, extracted IoCs and mapped TTPs to **MITRE ATT&CK**.

### Software Engineer

Remote

*academai.ru — AI-powered EdTech startup building personalized LLM learning tools*

*Aug. 2023 – Aug. 2024*

- Designed and delivered an LLM-app generating personalised educational content, used in production, using **Python, Flask, AsyncIO, and Langchain**.
- Developed a responsive frontend with **Next.js, TypeScript, Prisma, and Auth.js**, ensuring seamless user authentication and consistent UI across the platform.
- Reduced deployment friction by building a full **CI/CD pipeline** via GitHub Actions with **Docker** containerization, cutting release cycles significantly.

### Software Developer

Russia

*ECP Progress LLC — Regional manufacturer of high-voltage ceramic capacitors*

*May 2022 – Aug. 2023*

- Designed and developed a full stack warehouse **QR-inventory system** using **Python and FastAPI**, replacing a manual tracking process entirely.
- Conducted personnel interviews with 10+ stakeholders to gather requirements, reducing ambiguity and aligning the solution with real operational needs.
- Owned the complete development lifecycle: backlogging, architecture design, code reviews, testing, debugging, and production deployment.

## Skills

**Languages:** Python, Go, TypeScript, JavaScript, SQL, NoSQL

**Frameworks / Libraries:** FastAPI, Flask, Next.js, React, Redux, Langchain, Prisma, Auth.js, Hardhat, Web3.py

**Tools:** Docker, Nginx, Hyperledger Fabric, Git, GitHub Actions, AsyncIO, S3, Airflow, YARA, Chainsaw

**Language Skills:** [English C1](#), [Chinese HSK3](#), Russian native

## Education

**Chongqing University of Posts and Telecommunications**  
*M.S. Network & Information Security*

Chongqing, China  
Sept. 2024 – Present

**Ukhta State Technical University**  
*B.S. Information Systems and Technologies*    **GPA: 4.5/5.0**

Russia  
March. 2022 – June 2024

**St. Petersburg State University of Telecommunications named after Prof. M.A. Bonch-Bruевич**  
*B.S. Information Systems and Technologies*    **GPA: 4.2/5.0**

Russia  
Sept. 2020 – March 2022

## Publications

**MFCTIIF: Multi-Feed Cyber Threat Intelligence Integration Framework**

Jan. 2026

*Isenovets A.V., Tang F. – International Research Journal, No. 1 (163)*

[DOI](#)

Proposed a modular framework aggregating heterogeneous CTI feeds (MalwareBazaar, VirusTotal, APT ETDA), performing metadata enrichment, synonym resolution, and automated threat-level classification; evaluated on 100 malware samples with 15–17s end-to-end latency.

**EVMK-SSE: Efficient and Verifiable Multi-Keyword Symmetric Searchable Encryption**

Dec. 2025

*Zhu H., Tang F., Qin W., Shan J., Wang P., Isenovets A. – J. King Saud Univ. Comput. Inf. Sci.*

[DOI](#)

Proposed EVMK-SSE, an efficient and verifiable multi-keyword SSE scheme replacing DH-OPRF with a lightweight OT-based client-independent relaxed OPRF, reducing computational overhead while maintaining strong privacy guarantees for outsourced cloud databases.

**Bringing Private Reads to Hyperledger Fabric via Private Information Retrieval**

Nov. 2025

*Isenovets A., Tang F., Zhu H., Wang P., Liu L. – arXiv preprint (submitted to IEEE)*

[arXiv:2511.02656](#)

Proposed and implemented a BGV homomorphic encryption-based PIR mechanism natively in Hyperledger Fabric chain-code, enabling private world-state reads without modifying Fabric's core architecture; achieved 113 ms end-to-end latency and ~2 MB peer traffic per query across a multi-channel prototype.

## Achievements

**5 Science Conferences**

Apr. 2022 – Apr. 2023

Won **3 consecutive first places** in paper evaluations across various scientific conferences.

**SberStudent Product Sprint**

June 2023 – Nov. 2023

Advanced [youknow](#) (academai.ru) – an LLM-powered personalized course generator – to the finalist stage and presented the product MVP at the **regional demo in St. Petersburg** out of hundreds of student teams nationwide.

**iTechPred Product Sprint**

Oct. 2023 – Nov. 2023

Pitched [youknow](#) as an EdTech product at Petrozavodsk State University's student sprint, reaching the finals and presenting at the regional online demo day.

**MIPT & Sber Phystech GigaChat Challenge Hackathon**

Dec. 2023

Developed [youknow](#) (academai.ru) – an LLM-app generating personalized educational courses – using **GigaChat** and **Kandinsky** APIs within a 48-hour hackathon sprint.

**Kaspersky Cyberimmune Development Hackathon 2.0**

Oct. 2023 – Dec. 2023

Contributed to the design of a **cyber-attack resistant architecture** for an on-board drone inspector system protecting critical infrastructure.
