

Artur lasenovets

Information Security Research Engineer

archee.busy@gmail.com • [GitHub](#) • [Portfolio](#) • [ORCID](#) • [LinkedIn](#)

Profile	4+ years of experience in software and security engineering. I develop in Go, Python, TypeScript, and I am currently learning Rust. I translate cryptographic protocols from papers into code, conduct security, correctness and leakage analysis, and develop systems for private data search, retrieval, and processing using homomorphic encryption.	
Research Interests	<i>Homomorphic encryption, private information retrieval, private pattern matching, searchable encryption, privacy-enhancing technologies, and blockchain privacy.</i>	
Education	Chongqing University of Posts and Telecommunications , Chongqing, China	
	◇ M.S. in Network and Information Security	Sep. 2024–Jul. 2027 (<i>expected</i>)
	◇ Supervisor: Prof. Tang Fei	
	◇ Average mark: 95/100	
	Ukhta State Technical University , Ukhta, Russia	
Publications	◇ B.S. in Information Systems and Technologies	Mar. 2022–Jun. 2024
	◇ GPA: 4.45/5.00	
	St. Petersburg State University of Telecommunications , St. Petersburg, Russia	
	◇ B.S. studies in Information Systems and Technologies	Sep. 2020–Mar. 2022 (<i>transferred</i>)
	Published Works and Preprints	
Awards and Achievements	Artur lasenovets , Fei Tang, H. Zhu, P. Wang, and L. Liu. “ Bringing Private Reads to Hyperledger Fabric via Private Information Retrieval ,” arXiv:2511.02656, 2025. Manuscript under review.	
	H. Zhu, F. Tang, W. Qin, J. Shan, P. Wang, and Artur lasenovets . “ EVMK-SSE: Efficient and Verifiable Multi-Keyword Symmetric Searchable Encryption ,” <i>Journal of King Saud University – Computer and Information Sciences</i> , 2025.	
	Artur lasenovets and Fei Tang. “ MFCTIIF: Multi-Feed Cyber Threat Intelligence Integration Framework ,” <i>International Research Journal</i> , no. 1 (163), 2026.	
	Piyumi M. S. Rajapaksha*, Artur lasenovets *, Yinxue Yi, and Fei Tang. “TWAPPA-FRL: Trust-Weighted Privacy-Preserving Aggregation for Federated Reinforcement Learning in Collaborative Intrusion Detection,” 2026. Manuscript under review. *Equal contribution.	
	Chinese Government Scholarship (CSC) for Graduate Studies	2024–2027
	Full scholarship for the entire M.S. programme at CQUPT.	
	Sber Student Accelerator Regional Demo Day	2023
	Completed the Sber Student Accelerator with the AcademAI team and participated in the North-Western District regional demo day.	
	Winner, EdTech Project Competition	2023
	Presented LLM-based educational platform and won the competition organized by the MIPT Phystech School, the Fund for Development of Phystech Schools, and Startech.Base.	
	MIPT & Sber Phystech Gigachat Challenge	2023
	Participated in the Phystech Gigachat Challenge Hackathon, developing a LLM-based educational platform using GigaChat and Kandinsky APIs within a 48-hour sprint.	
	Kaspersky Cyberimmunity Hackathon 2.0	2023
	Participated in Kaspersky’s Cyberimmunity Hackathon in Fall 2023, placing 11th out of 100+ teams for developing traffic monitoring solutions for low-altitude airspace security.	
	First Degree Diploma, Severgeoecontech	2022
	Awarded first place in the Modern Information Technologies section of the 23rd International Youth Scientific Conference.	
	Supporting certificates	

Research Experience	Graduate Researcher @ CQUPT Sep. 2024–Present ◇ HLF-CPIR: Designed and implemented BGV-based private information retrieval in Go using Lattigo for private world-state queries in Hyperledger Fabric, with query privacy under an HBC peer model based on the IND-CPA security of BGV. ◇ TWAPPA-FRL: Designed the architecture and implemented CKKS-based private aggregation of DQN model updates using TenSEAL, with IND-CPA-based client-update privacy under an HBC aggregator model and explicit leakage analysis. ◇ EVMK-SSE: Analyzed the threat model with an HBC data owner and user and a malicious cloud server; reviewed the query-privacy argument in the real/ideal model, based on OT security and the pseudorandomness of CI-rOPRF/PRG under explicitly defined search- and access-pattern leakage. ◇ Reconstructed preprocessing models, query construction, server computation, and response expansion of PIR protocols such as Piano, FrodoPIR/SimplePIR, XPIR, SealPIR, and OnionPIR, and analyzed their communication/performance trade-offs.
Industry Internships	Information Security Engineer @ Positive Technologies Aug. 2024–Feb. 2025 ◇ Built an automated malware-processing pipeline with Airflow DAG that collects samples from MalwareBazaar, stores artifacts in S3, and scans them with YARA. ◇ Developed Python tools with unit-test coverage for validating Windows paths, network configurations, and endpoint-control policies. ◇ Analyzed EVTX logs, PowerShell, and malicious VBA macros; extracted IoCs and mapped TTPs to MITRE ATT&CK for CVE-2020-5902 and CVE-2023-38831.
Other Experience	Software Engineer @ AcademAI Sep. 2023–Aug. 2024 ◇ Developed the application layer with Next.js/TypeScript application, Python/Flask services, PostgreSQL/Prisma data layer, and Auth.js authentication for an LLM-based educational platform used by computer science university faculty and students. ◇ Integrated LangChain-based generation workflows with AsyncIO and Redis for asynchronous LLM orchestration and intermediate state management. ◇ Containerized the application with Docker, configured Nginx, deployed to cloud-hosted VPS infrastructure, and built the GitHub Actions CI/CD workflow. Junior Software Engineer @ ZVEK “Progress” LLC May. 2022–Aug. 2023 ◇ Designed and developed a full-stack warehouse QR-inventory system using Python, FastAPI, and MySQL, replacing a manual tracking process entirely. ◇ Supported approximately 1,000 records and 20+ concurrent users; added unit-test coverage, Git-based development, debugging, and Linux deployment.
Skills	◇ Programming: Go, Python, Rust, TypeScript, C++, SQL, Bash, LaTeX ◇ Privacy-enhancing technologies: Private Information Retrieval (PIR/CPIR), Searchable Symmetric Encryption (SSE), Private Pattern Search ◇ Homomorphic encryption: Brakerski–Gentry–Vaikuntanathan (BGV), Brakerski–Fan–Vercauteren (BFV), Cheon–Kim–Kim–Song (CKKS) ◇ Post-quantum cryptography: ML-KEM, ML-DSA, SLH-DSA; LWE, RLWE ◇ Cryptographic libraries: Lattigo, SEAL, TenSEAL, OpenFHE, fheanor ◇ Systems and infrastructure: Linux, Proxmox VE, VMware, Docker, GitHub Actions, GitLab CI/CD, Nginx, Ansible, Airflow, S3, Hyperledger Fabric ◇ Security engineering: YARA, Chainsaw, malware/log analysis, MITRE ATT&CK ◇ Languages: Russian — native; English — C1; Chinese — HSK3
