

ARTUR IASENOVETS

Chongqing, China • archee.busy@gmail.com • [LinkedIn](#) • [ORCID](#) • [Portfolio](#)

Graduate Student Researcher in Network & Information Security at Chongqing University of Posts and Telecommunications, with a background in applied cryptography, software engineering, and security engineering. Submitted 3 research papers on homomorphic encryption-based Private Information Retrieval, verifiable Symmetric Searchable Encryption, and multi-feed Cyber Threat Intelligence. Interested in applying FHE schemes and cryptographic constructions in novel system contexts, with hands-on experience in security research through an internship at Positive Technologies and software engineering via previous work at an EdTech startup.

Research Interests: Homomorphic Encryption, Privacy-Enhancing Technologies, Threat Intelligence, Blockchain

Education

- **Chongqing University of Posts and Telecommunications** Chongqing, China
M.S. Network & Information Security Supervisor: [Prof. Tang Fei](#)
GPA: (3.9/4.0) Sept. 2024 – Present
- **Ukhta State Technical University** Russia
B.S. Information Systems and Technologies March 2022 – June 2024
GPA: 4.5/5.0 (3.6/4.0)
- **St. Petersburg State University of Telecommunications named after Prof. M.A. Bonch-Bruевич** Russia
B.S. Information Systems and Technologies Sept. 2020 – March 2022

Publications

- Bringing Private Reads to Hyperledger Fabric via Private Information Retrieval** Nov. 2025
lasenovets A., Tang F., Zhu H., Wang P., Liu L. – arXiv preprint (submitted to IEEE) [arXiv:2511.02656](#)
Proposed and implemented a BGV homomorphic encryption-based PIR mechanism natively in Hyperledger Fabric chaincode, enabling private world-state reads without modifying Fabric's core architecture; achieved 113 ms end-to-end latency and ~2 MB peer traffic per query across a multi-channel prototype.
- EVMK-SSE: Efficient and Verifiable Multi-Keyword Symmetric Searchable Encryption** Dec. 2025
Zhu H., Tang F., Qin W., Shan J., Wang P., lasenovets A. – J. King Saud Univ. Comput. Inf. Sci. [DOI](#)
Proposed EVMK-SSE, replacing DH-OPRF with a lightweight OT-based client-independent relaxed OPRF in a multi-keyword SSE scheme, reducing computational overhead while maintaining strong privacy guarantees for outsourced encrypted cloud databases.
- MFCTIIF: Multi-Feed Cyber Threat Intelligence Integration Framework** Jan. 2026
lasenovets A.V., Tang F. – International Research Journal, No. 1 (163) [DOI](#)
Proposed a modular CTI framework aggregating heterogeneous feeds (MalwareBazaar, VirusTotal, APT ETDA), performing metadata enrichment, synonym resolution, and automated threat-level classification; evaluated on 100 malware samples with ~15–17s end-to-end latency.

Skills

Languages: Python, Go, TypeScript, JavaScript, SQL, NoSQL
Frameworks / Libraries: Lattigo, Microsoft SEAL, FastAPI, Langchain, Hardhat, Web3.py
Tools: LWE-Estimator, Hyperledger Fabric, Git, Nginx, Docker, S3, Airflow, YARA, Chainsaw
Language Skills: [English C1](#), [Chinese HSK3](#), Russian native

Experience

Graduate Student Researcher

Chongqing University of Posts and Telecommunications – Applied Cryptography Group

Chongqing, China

Sept. 2024 – Present

- Designed and implemented a BGV homomorphic encryption-based PIR scheme in Go using Lattigo, integrated natively into Hyperledger Fabric chaincode.
- Submitted 3 research papers spanning homomorphic encryption, searchable encryption, and cyber threat intelligence, including one published in a peer-reviewed journal.
- Contributing to lab grant and project work in privacy-preserving computation and applied cryptography.
- Participating in weekly research seminars, paper reviews, and collaborative research discussions within the group.

Security Intern

Positive Technologies – Leading Eastern European cybersecurity company

Remote

Aug. 2024 – Feb. 2025

- Developed Python regex utilities with unit-test coverage for parsing Windows file paths and network configs at the MaxPatrol EDR product team; built a Windows Prefetch-based software allowlist/blocklist checker and a Dockerized Telegram bot for automated compliance monitoring.
- Engineered a Python malware-processing pipeline for the Threat Intelligence team, fetching samples from VX-Underground, storing artifacts in S3/MinIO, and scanning with YARA rules; packaged as an Airflow DAG for daily automated ingestion.
- Performed hands-on security analysis as part of the SOC team: investigated attack chains for CVE-2020-5902 and CVE-2023-38831, conducted EVTX log forensics with Chainsaw, deobfuscated PowerShell payloads, analyzed malicious VBA macros with oletools, extracted IoCs and mapped TTPs to MITRE ATT&CK.

Software Engineer

academai.ru – AI-powered EdTech startup under Sberbank's Accelerator program

Remote

Aug. 2023 – Aug. 2024

- Built a Flask REST API backend where each endpoint encapsulates a structured system prompt, orchestrating LLM calls via Langchain to generate individual course components on demand.
- Developed a responsive frontend with Next.js, TypeScript, Prisma, and Auth.js, ensuring seamless user authentication and consistent UI across the platform.
- Reduced deployment friction by building a full CI/CD pipeline via GitHub Actions with Docker containerization, cutting release cycles significantly.

Achievements

Chinese Government Scholarship for Graduate Studies

Sept. 2024 – Aug. 2027

Awarded a full scholarship by the Chinese government for the entire duration of my master's program at CQUPT.

5 Science Conferences

Apr. 2022 – Apr. 2023

Won 3 consecutive first places in paper evaluations across various scientific conferences while at USTU.

Kaspersky Cyberimmune Development Hackathon 2.0

Dec. 2023

Participated in the Kaspersky's Cyberimmunity Hackathon in Fall 2023, placed 11th out of 100+ teams.

MIPT & Sber Phystech GigaChat Challenge Hackathon

Dec. 2023

Developed an LLM-app generating personalized educational courses ([youknow](#)) using Sberbank's GigaChat and Kandinsky APIs within a 48-hour sprint, later presented on the regional final demo day.
